

Installing a LAMP Stack on Digital Ocean

Installing a LAMP Stack On a Live Server

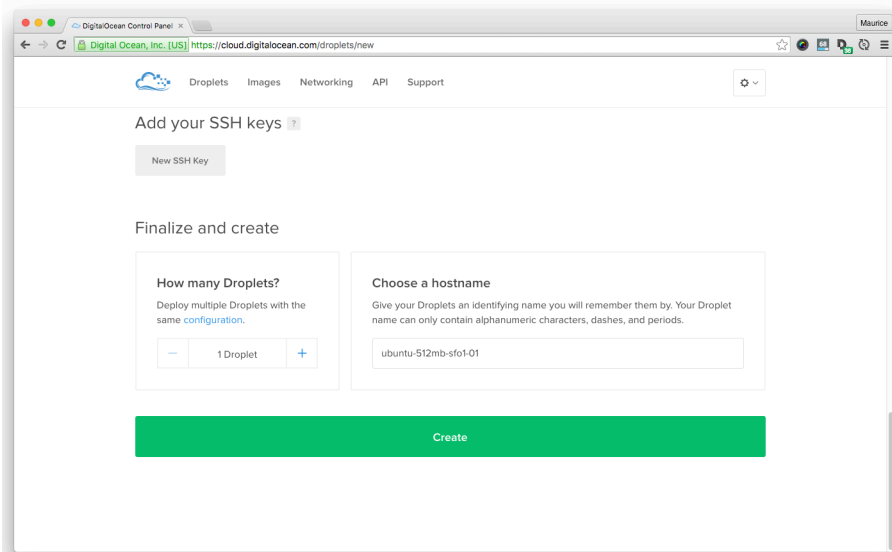

1. Sign Up to Digital Ocean.
2. Log into your Digital Ocean account.
3. Select; Create Droplet.

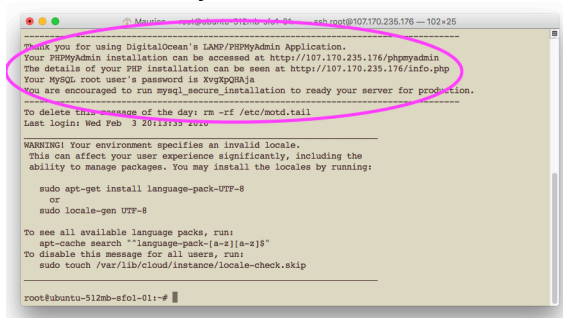

4. Select; One-click Apps and choose; PHPMyAdmin on 14.04.

5. You can name your droplet and then select; Create.

6. You'll be sent an email with login credentials; IP address, username: root and password.
7. Open Terminal App (Applications > Terminal).
8. Type the following command (where 1.1.1.1 is replaced with your given IP Address):
`ssh root@1.1.1.1`
9. You may be prompted with a warning message asking if it's okay? Type: yes.
10. Type your password when prompted.
11. Once logged in you'll be prompted to change your password, type your current password.
12. Enter your new password when prompted and retype your new password when prompted.
13. Congratulations you've successfully logged into your web server.
14. Keep your login credentials; IP address, username and new password in a secure place
15. A message has appeared that reveals your MySQL root user's password and the URL of PHPMyAdmin.

16. Keep these login credentials; URL, username and password in a secure place too.

17. Visit the the URL of PHPMyAdmin and log in.
